Physical Fitness Assessment Requirements:

The Physical Fitness Assessment (PFA) will be conducted at ***Carbondale Fire Station #2 located at 401 North Glenview Drive on*** _____ for candidates who have passed the written exam. The PFA is designed to evaluate the basic physical condition of the candidate in endurance, strength, flexibility, agility and for fear of heights. All sections of the PFA must be passed successfully. Because the requirements are set to minimum standards, failure to pass any section would indicate the candidate is physically unfit for duty as an active member of the department. The assessment will then be terminated for that candidate. Candidates should wear appropriate physical fitness attire. In addition, sweatpants/pants will be required for the Confidence Course portion of the exam. The PFA will include the following: Ladder Climb, Sit-Ups, Push-Ups, Mannequin Drag, Pike Pole Grip and Pull, Confidence Course, and Agility Run.

1. **LADDER CLIMB - Purpose:** To measure the applicant's aerobic capacity and leg strength as necessary to climb while also testing the fear of heights. **Procedure:** The applicant, provided with a Class 3 safety harness connected to a manned rope belay system, shall mount an aerial apparatus and be placed at the starting point at the base of the aerial ladder. At the signal, "Go", the applicant will safely ascend the aerial ladder, maintaining at least three points of contact at all times. The applicant must grab the top rung of the ladder. At that time, the Examiner will ask the applicant a series of questions which the applicant must answer correctly. When advised to do so, the applicant will then safely descend the ladder maintaining at least three points of contact at all times. There will be no time limits placed upon this procedure, however pausing for a period any longer than ten seconds or being unable to complete the test shall result in failure of the procedure.

Minimum Standard – 75 feet at a 65 degree angle

2. **SIT-UPS - Purpose:** The purpose of this test is to determine abdominal and back muscular strength needed for lifting stretchers, pulling hoses, lifting ladders and holding hose lines. **Procedure:** Candidate lies flat on back with knee joints flexed at an approximately 75 degree angle, hands firmly clasped behind neck. The examiner holds the feet down. The candidate will curl up to a sitting position, culminated when elbows touch knees in alternating sequence. The candidate returns to position when both shoulder blades touch the floor after each curl.

Minimum Standard - 30 without stopping

3. **PUSH-UPS - Purpose:** Push-ups will stimulate the candidate's strength to push as may be required with the use of pike poles, etc. **Procedure:** Candidate lies flat on the floor, face down, with hands (palm side down) on the floor under the shoulders. The candidate then raises the body by extending the arms until they are perfectly straight, returning to the original position and continuing without stopping to rest. Females will perform push-ups pivoting from the knees.

Minimum Standard - 12 times

4. **MANNEQUIN DRAG - Purpose:** To measure the overall strength of the applicant. **Procedure:** The applicant will be presented with a training mannequin weighing approximately 145 pounds. The mannequin will be lying on the ground at the start point. From a position behind the mannequin, the applicant shall lift the mannequin's torso to the applicant's chest, with the arms placed around the mannequin's torso. The applicant shall drag the mannequin allowing the feet to remain on the ground to the finish point. Dropping of the mannequin or stopping shall not result in failure of the procedure.

Minimum Standard – 75 feet drag

Minimum Standard Time – 45 seconds

5. **PIKE POLE GRIP AND PULL – Purpose:** The purpose of this test is to measure the upper body and grip strength necessary for forcible entry, overhaul and hoisting. **Procedure:** Given a 6' pike pole attached to a rope and overhead pulley, the candidate will raise and lower a 35 pound weight without allowing the weight to contact the ground.

Minimum Standard – 15 repetitions

6. **CONFIDENCE COURSE – Purpose:** This test is designed to measure how well the joint and muscle sensors react in order to control movement and maintain balance, as well as testing the ability to walk or crawl inside an enclosed, darkened structure with narrow and uneven surfaces. **Procedure:** The applicant will be provided with the appropriate personal protective equipment, blacked out mask and Self Contained Breathing Apparatus. (*Note – The candidate will not be required to breathe from the respirator.) At the signal "Go", the candidate will follow an uncharged hose line through the obstacle course. The candidate must maintain contact with the hose as to not get lost or deviate from the pre-determined route. Once reaching the end of the hose, the candidate will find a nozzle, which he/she must successfully attach to the hose, and then open the bail of the nozzle to signal completion of the drill. This is not a timed event, however, should the candidate stop for more than 15 seconds or become disoriented and unable to complete the test, the result shall be failure of the procedure.

7. **AGILITY RUN - Purpose:** The purpose of this test is to show reaction and movement time as indicators of neuromuscular efficiency which are important in daily activities in firefighting. **Procedure:** Two small blocks of wood are placed in circular areas one foot in diameter marked on the floor at thirty-four (34') and forty-two (42') feet, respectively, from the starting point. At the signal "go," the candidate must go from behind the starting line and bring the blocks in one at a time and place them in a circular area marked behind the starting line. (The candidate must never have more than one block in the hand at any time.)

Minimum Standard - Must be completed within 35 seconds
